Low-power Configurable Multiple Function Gate

General Description

The ET74AHC1G97 is a configurable multiple function gate with Schmitt trigger inputs. The device can be configured as any of the following logic functions MUX, AND, OR, NAND, NOR, inverter and buffer; using the 3-bit input. All inputs can be connected to V_{CC} or GND.

Inputs can be driven from either 3.3V or 5V devices. This feature allows the use of these devices as translators in mixed 3.3V and 5V environments.

This device is fully specified for partial power-down applications using I_{OFF}. The I_{OFF} circuitry disables the output, preventing the damaging back-flow current through the device when it is powered down.
